SELECTED PROJECTS

Long-term Point Tracking

Advisors: Profs. [Leonidas J. Guibas](#) and [Gordon Wetzstein](#)

- ◇ Introduced PointOdyssey, a large-scale synthetic dataset for the training and evaluation of long-term fine-grained tracking algorithms, which is collected by re-purposing human and animal motion capture data in outdoor scenes with randomized 3D assets.
- ◇ Proposed a novel point tracking method, greatly widening the temporal receptive field of current methods and achieving state-of-the-art performance.

Gaze-informed Human Motion Prediction

Advisor: Prof. [Leonidas J. Guibas](#) and Prof. [Yebin Liu](#)

- ◇ Proposed a large-scale human motion dataset that enables investigating the benefits of eye gaze under diverse scenes and motion dynamics.
- ◇ Proposed a novel architecture with a bidirectional multi-modal fusion that better suits gaze-informed human motion prediction through mutually disambiguating motion and gaze.
- ◇ Validated the usefulness of eye gaze in improving human motion prediction accuracy.

Camera Re-localization in Extreme Environments

Advisor: Prof. [Leonidas J. Guibas](#)

- ◇ Extended the scope of the camera relocalization to visually ambiguous extreme environments, e.g., underwater or extraterrestrial terrains.
- ◇ Proposed a robust system with temporal-enhanced localization to handle visual ambiguity and image enhancement to benefit the downstream feature-based reconstruction and localization.
- ◇ Demonstrated the state-of-the-art performance in extreme scenes and comparative results on common benchmarks.

Multi-human Reconstruction

Advisor: Prof. [Yebin Liu](#)

- ◇ Proposed a novel method for high-fidelity multi-view reconstruction of multiple interacting characters by introducing an attention-aware coarse-to-fine reconstruction pipeline.
- ◇ Firstly achieved detailed reconstruction of clothed humans in real world multi-person scenes from only sparse view inputs.
- ◇ Contributed a high-quality 3D human dataset, MultiHuman, containing 150 multi-person scans with detailed geometry and photorealistic texture.
